

# ANCHOR IRON POST

FOR RELIABLE ANCHORING

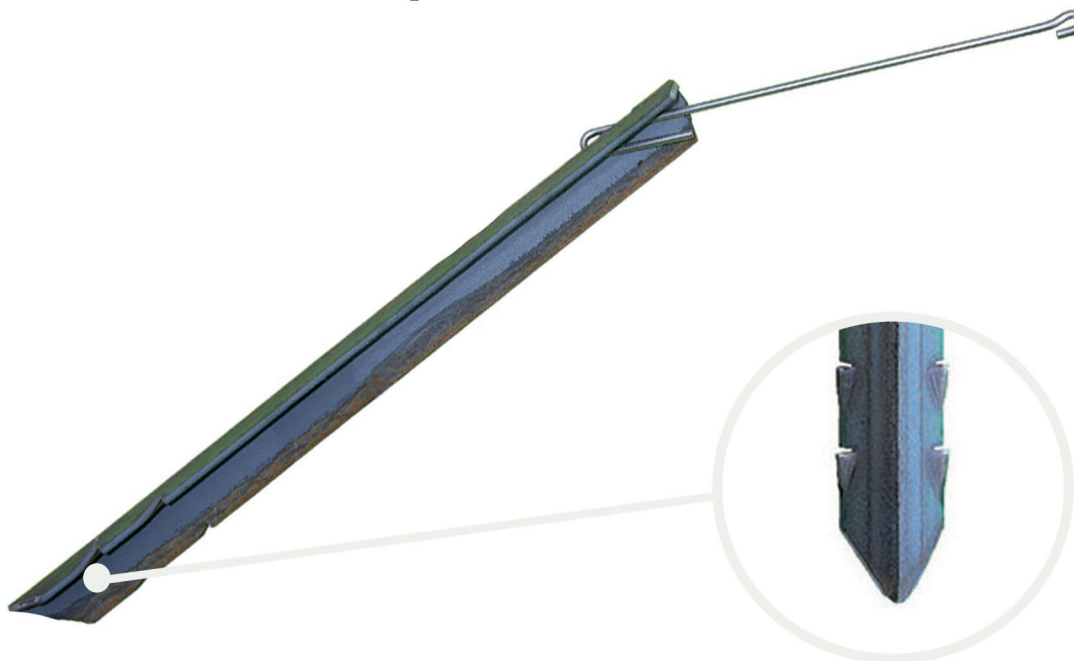

## What are the advantages?

- Available in different lengths;
- Perfect insertion into the ground;
- Optimises the maintenance of the mooring.

### Amarinox® ( anchor + extender)

Amarinox® consists of a blunt, notched iron angle post and an extension piece. The Amarinox® is available in different lengths, depending on the depth of the anchorage required.

### Anchor without extender

This blunt and notched angle allows a perfect insertion in your grounds for an optimal holding. Different lengths are available depending on the depth of the anchoring required. It can be combined perfectly with the SCDC estenders.

### The spade head anchor

The spade head anchor Tie is designed to allow perfect anchoring in hard and stony ground thanks to its blunt shape.

### The corkscrew anchor

With a 12 mm diameter construction, and made of galvanised steel, it has been designed for better insertion into your soil thanks to its bevelled finish. It is perfectly suited for high-tension vines and is suitable for loose soil.
